

# Protozoa

## A Poseidon Adventure!

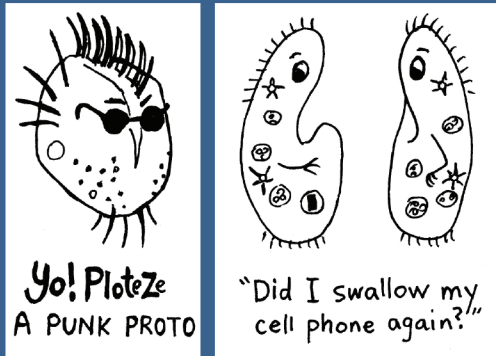

Ellen J. McHenry

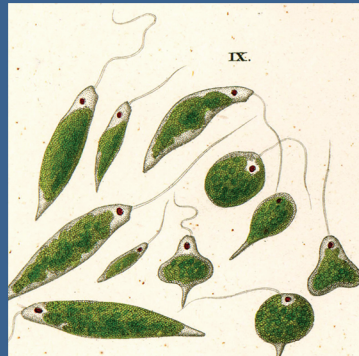

The most exciting fishing trip you'll ever experience is waiting for you inside this book! Join our cartoon heros as they shrink down to microscopic size and meet many bizarre and beautiful protozoans. The text is funny as well as informative, and in the teacher's section you will be provided with patterns and instructions for many games and crafts. It's not just education that's fun, it's fun that's educational!

Students are encouraged to create their own cartoons about ciliates.

Examples of historical illustrations are shown whenever possible.

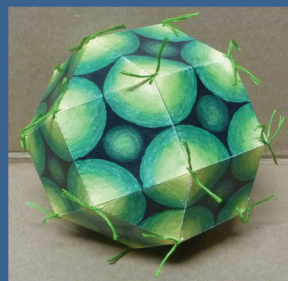

The Paramecium pillow craft will be popular with both girls and boys.

Make and decorate diatom boxes.

Make desmid ornaments.

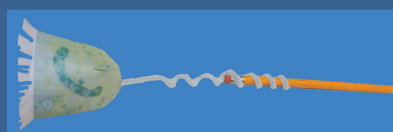

Make a Volvox volleyball and play a game with it.

Collect protozoa cards and play several games with them.

Make a wall mural (or a personal-size mini-mural) showing everything in scale.

Make a Vorticella "pencil topper."

Play a review game called "Protozoo" using all the cards you've collected.
