

AN OVERVIEW OF THE HYDROPLATE THEORY

This theory was first proposed by Dr. Walt Brown in 1980.

RUPTURE	FLOOD	CONTINENTAL DRIFT	COMPRESSION EVENT	RECOVERY
a few hours	many months	a few days	hours or days	thousands of years, and still continuing today
<p>The subterranean chamber bursts open.</p>  <p>H₂O H₂O (w/ lots of minerals)</p> <p>Comets and asteroids are launched</p>  <p>Animals are frozen?</p> 		 <p>The Mid-Atlantic Ridge appears.</p>	<p>The mountains are pushed up.</p>  <p>friction</p> <p>The Big Roll</p> 	<p>Ocean trenches, sea mounts</p>  <p>continent ocean</p> <p>Methane hydrates form at bases of continental shelves.</p>  <p>Grand Canyon is formed.</p>  <p>Grand Lake and Hopi Lake</p>
	<p>erosion water erosion</p> <p>Continental slopes are formed.</p> 		<p>HEAT and pressure</p> <p>Metamorphic rocks</p> 	<p>Grand Lake and Hopi Lake is formed.</p> 
			 <p>Geothermal heating begins</p>	<p>"Ice Age" (Not full strength until hundreds of years after the Flood.)</p> 
	 <p>Sedimentary layers are formed by liquefaction.</p>		 <p>Overthrusts occur</p>	<p>Earthquakes,--many at first, now less</p> 
				<p>Volcanoes-- many at first, less today.</p> 
		<p>Coal, oil and salt domes form.</p> 		<p>Flood basalts spill up onto the surface of the earth.</p>
